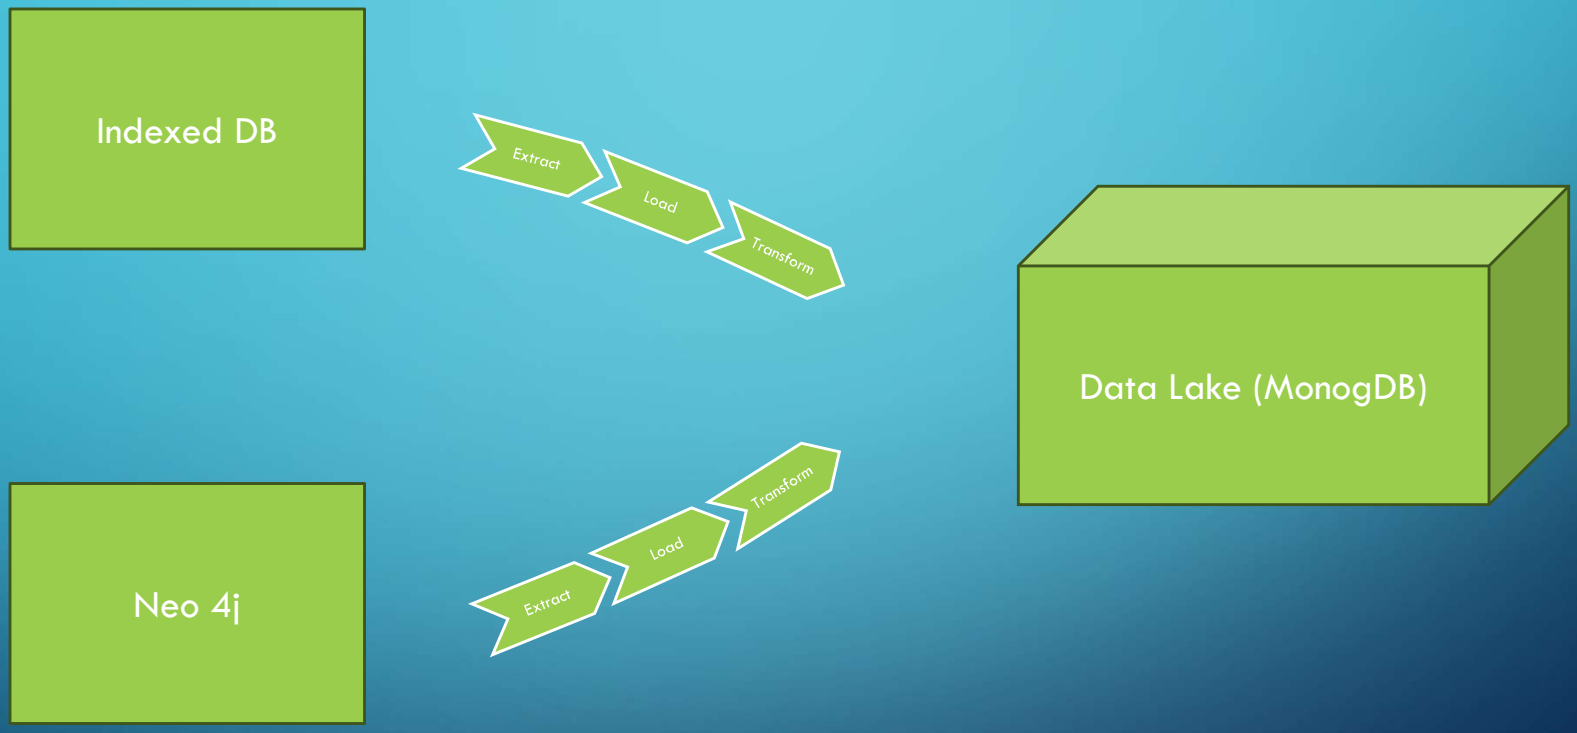
ARCHITECTURE AND DATA FLOW



LESSONS LERANED

- Upserts prevent Neo4j duplication
- Had to align .env names with script:
- Metadata unifies mismatched schemas across databasesUpserts prevent Neo4j duplication
- IndexedDB simulation works well in Node.js environments
- How to write data from multiple databases into a single lake.

CHALLENGES

- Required the whole .env for Neo4j file, if did not mention, Neo4j skipped silently
- How to handle Neo4j Browse
- For every refresh Indexed DB added new files
- Case sensitive issues matters in MongoDB cluster name.
